Introduction

The National Center for PTSD Dissemination and Training Division (NCPTSD D&T) Fellowship is one of 21 sites of the VA Advanced Fellowship Program in Mental Illness Research and Treatment, which is sponsored by the Office of Academic Affiliations. NCPTSD was created in 1989 within the Department of Veterans Affairs in response to a Congressional mandate. The National Center for PTSD is a world leader in research and education programs focusing on PTSD and other psychological and medical consequences of traumatic stress. The mission of the NCPTSD is to advance the clinical care and social welfare of America's Veterans and others who have experienced trauma, or who suffer from PTSD, through research, education, and training in the science, diagnosis, and treatment of PTSD and stress-related disorders. See more at http://www.ptsd.va.gov/about/index.asp.

The NCPTSD D&T Division promotes best practices in treatment of Veterans with PTSD and related problems through training and practice change efforts based on implementation science, and by developing and researching novel interventions to expand access and improve effectiveness of care. Areas of special focus include web-based training, smart phone technology, internet, and other intervention technologies, evidence-based treatment, military sexual trauma, and disaster mental health. Fellows will receive advanced clinical training in treatment of PTSD and common comorbid disorders, will participate in PTSD education and dissemination efforts, and will be mentored in research related to improving PTSD assessment, treatment and delivery of services. Potential research areas include PTSD treatment effectiveness trials, innovations in treatment applications, health services research on access and quality of PTSD care, implementation science studies on mechanisms for expanding adoption of best care practices and telemedicine trials testing video, internet, or smart phone-based interventions. Fellows will have also a unique opportunity to gain experience with large-scale dissemination efforts by participating in one or more national dissemination/implementation initiatives. We hope this brochure can help you decide whether you want to submit an application to the NCPTSD D&T Fellowship at VA Palo Alto.

The national training mission of VA is broad and explicitly includes training of health care professionals for the nation, as well as for the VA system. We train Fellows who go on to VA jobs, and we train others who go on to work in academia, other medical centers, the private sector, etc. The profession of Psychology and the whole health care system in this country are served by having well trained, enthusiastic, creative professionals. We strive to support VA's training mission, for VA's specific goals and for the nation.
Training at VA Palo Alto

The VA Palo Alto Health Care System (VAPAHCS) provides a particular kind of training, based on our view of the role of Psychology in the VA system. We are committed to the scientist-practitioner model of psychology, and the postdoctoral training experience is organized accordingly. We are guided both by the original articulation of the Boulder Model (Raimy, 1950) and by the update of the scientist practitioner model, as articulated at the Gainesville conference in 1991 and in the subsequent publication following that conference (Belar & Perry, 1992).

The NCPTSD Fellowship Program’s scientist-practitioner model has a curriculum that features learning experiences that are sequential, graduated in complexity and that facilitate transition to advanced competency and independence.

The mission of the VA Advanced Fellowship Postdoctoral Training Program is to train psychologists who meet general advanced practice competencies in psychology and can function effectively as professional psychologists in a broad range of multidisciplinary settings. Prior to beginning the postdoctoral experience, Fellows are expected to have attained a high level of accomplishment in generalist training. The primary goal of the postdoctoral program is for Fellows to develop the full range of skills required for independent functioning as a psychologist, including skills involved in clinical assessment and intervention; consultation, supervision, and teaching; scholarly inquiry; organization, administration, management, and program evaluation activities; and awareness of and sensitivity to professional, ethical, legal, and diversity issues.

Complementing our goal of preparing Fellows to function as independent psychologists, we also aim to prepare Fellows for practice in high priority areas of health care for veterans. VA’s national training goals are listed as primary care, geriatrics, mental health and rehabilitation (Associated Health Professions Review Subcommittee, 1997). The NCPTSD D&T Fellowship includes the emphasis area of Post-Traumatic Stress Disorder (PTSD). In collaboration with their mentors, Fellows will develop and implement a research project, publish and present findings, participate in grant writing, and utilize the latest technology for educational activities and clinical service delivery.

In this introduction, we describe how the training program is organized and program procedures such as application and selection. In addition, we discuss our philosophy of training and provide additional information about expected competencies that postdoctoral Fellows will acquire. Following the introduction, sections appear that describe the training sites, including specific details on program structure, patient population, theoretical orientation, and the nature of supervision for each training site. At the NCPTSD D&T, Fellows receive mentorship in
the emphasis areas of PTSD from internationally renowned clinical researchers. Please see Appendix A for a listing of our Faculty Mentors

**VA Palo Alto Health Care System Facilities**

VA Palo Alto is part of a national network of hospitals and clinics operated by the Department of Veterans Affairs to provide comprehensive health care to men and women who have served in the armed forces. This health care system is responding to many national changes in the health care field; our training program changes in concert with the changing organization and emphases of health care.

The Veterans Affairs Palo Alto Health Care System (VAPAHCS) is a teaching hospital, providing a full range of patient care services across 10 different hospital/clinic sites, with state-of-the-art technology as well as education and research. As of June 2015, this health care system has over 4000 employees, is located on more than 300 acres, and operates on an annual budget of over $915 million in Fiscal Year 14 (FY14). Our health care facilities operate 808 inpatient beds, including three Community Living Centers (formerly known as nursing homes) and a 100-bed homeless domiciliary, and over 50 primary care and specialty outpatient clinics, serving over 68,000 unique patients per year. Fellowship training sites are available at four campuses within the health care system (Palo Alto, Menlo Park, San Jose, and Livermore), with the great majority concentrated in the Palo Alto Division and the Menlo Park Division. The Palo Alto and Menlo Park Divisions are separated by 7 miles (15 minutes by car or shuttle).

VAPAHCS has the second largest research program in VA with annual funding of $58M. VA Palo Alto encompasses extensive research centers in geriatrics (GRECC), mental health (MIRECC), Alzheimer's disease, multi-site trials (Cooperative Studies Program), Spinal cord regeneration, schizophrenia, and post-traumatic stress disorder (NCPTSD). VAPAHCS also manages several centers supported by the VHA Office of Research and Development, including the Rehabilitation Research and Development Center (RR&D), Health Services Research and Development (HSR&D) Center for Innovation to Implementation (Ci2i), Program Evaluation Resource Center (PERC), and Health Economics Resource Center (HERC). Training resources are available for research or consultation at these and other programs.

Organizationally, the NCPTSD Fellowship is housed within the National Center for PTSD, Dissemination and Training Division, at VAPAHCS. Within VAPAHCS, this fellowship program operates conjointly with MIRECC and the broader Clinical Training Program within VAPAHCS Psychology Service.

The VAPAHCS is affiliated with the Stanford University School of Medicine and shares training programs for medical residents in psychiatry, medicine, surgery, rehabilitative medicine, and other medical specialties. In addition to these and the psychology training
program, VA PAHCS also has training programs for audiology/speech pathology, dentistry, dietetics, hospital management, nursing, pharmacy, social work, recreation therapy, occupational therapy, and optometry. Over 1500 students, interns, fellows, and residents are trained each year across these multiple disciplines.

In addition to basic medical and mental health care programs, this VA has a variety of specialized regional programs, including a Polytrauma Rehabilitation Center, a Spinal Cord Injury Center, the Western Region Blind Rehabilitation Center, the Men's and Women’s Trauma Recovery Programs, Homeless Veterans Rehabilitation program, a Geriatric Research, Educational, and Clinical Center (GRECC), and a Mental Illness Research, Education, and Clinical Center (MIRECC). Special psychological programs are available in health psychology, geropsychology, inpatient and outpatient psychiatric care, drug and alcohol treatment, and brain injury rehabilitation. Training opportunities are available in all of these programs.

**NCPTSD D&T Postdoctoral Funding, Benefits, and Eligibility**

The NCPTSD D&T VA Advanced Fellowship Postdoctoral Program is funded by the Office of Academic Affiliations of the Department of Veterans Affairs Central Office as an annual, earmarked allocation to the medical center. The current annual Postdoctoral stipend at VA Palo Alto is $50,227.50. This stipend requires a full calendar year of training. VA provides health care benefits for interns and postdoctoral fellows as for any other VA employee. Health benefits are also available to dependents and married spouses of interns and fellows, including to legally married same-sex spouses of interns and fellows. Unmarried partners of either sex are not eligible for health benefits, even those in legal civil unions or domestic partnerships. Insurance programs can be selected from a wide array of options. More information about VA stipends and benefits are available at [www.psychologytraining.va.gov/benefits.asp](http://www.psychologytraining.va.gov/benefits.asp).

Our training is geared to individuals who will have completed their doctoral degrees from APA-accredited clinical or counseling psychology program and will have completed an APA-accredited psychology internship program, are functioning at an advanced level, and have clinical and research experience in the emphasis area of interest. Eligibility requirements for VA postdoctoral fellowships are determined nationally and we have no authority to over-ride these requirements locally. All information about VA eligibility requirements is available at [http://www.paloalto.va.gov/services/mental/ncptsfellowship.asp](http://www.paloalto.va.gov/services/mental/ncptsfellowship.asp).

The number of postdoctoral positions available within this Fellowship is expected to be 1 in the 2017-2018 training year. Applicants with interest in PTSD are encouraged to apply.
NCPTSD D&T Fellowship Structure

The Fellowship consists of two calendar years of full-time supervised training; our start date can be somewhat variable, depending on the Fellow’s date of graduation and other needs. Generally, Fellows start on September 1 each year, but we have had Fellows start in August or later in September, up to October 1. A later start date than October 1 would not usually be considered. The Fellowship ending date will be determined based on the specific start date of each fellow. Fellows must complete the full two years of training, so a start date should be determined with consideration of hopes for availability for future employment (e.g., ending in time to begin an academic position). Training is based on a 40-hour workweek, so the total hours over a year come to 2,080. Out of those 2,080 hours, there is time off for vacation (13 days), illness (up to 13 days), Federal holidays (10 days), and authorized absence for professional activity. Like staff, Fellows are paid for 40 hours per week, no matter how much time is spent. Most staff do not get their work done in the allotted 40 hours, and we suspect that most Fellows will not either. A key notion in VA is that we are a "Service," not a department. To serve patients we must be available, and Fellows will see considerable emphasis on being available, especially during working hours. On the other hand, this is not a 60-hour per week or more Fellowship. Each Fellow will work at least 40 hours intensively each week. How much more than a Fellow works depends on many factors, including interest in additional training experiences, research involvement, time-effectiveness in completing paper work and other work demands, etc. The Fellow’s Primary Preceptor, the Fellowship Director and the Training Director will help plan a realistic program that balances taking advantage of training and professional development opportunities with time for a full, rich life outside of work. The training provided meets the requirements for licensure in California and meets or exceeds licensure requirements in every other state at this time. Regardless of the specific training plan, Postdoctoral Fellows will receive at least 4 hours per week of clinical supervision, with at least half of that in individual, face-to-face supervision. In addition, Fellows will have at least two different supervisors during the year.

Research Opportunities and Expectations

Each Fellow is expected to participate in research during their training tenure with the Fellowship. Fellows choose research projects within their stated area of emphasis (PTSD) and work collaboratively with their research mentors to: a) identify or develop meaningful clinical research projects that address key areas of veterans mental health needs; b) identify roles on ongoing clinical research projects (including the numerous clinical trials available at NCPTSD that may foster the advanced development of both clinical and research skills; and c) participate in the development and submission of empirical manuscripts, grants and other scholarly projects focused on the mental health needs of today’s veterans. Fellows are expected to complete a meaningful research project during their two year Fellowship, and to
consistently show clear markers of their research productivity. These key markers include: a) the development of a grant proposal; b) generating an article and submitting it for publication; c) presentation of this project at a professional meeting; d) developing and presenting an in-service training module, or some other marker of productivity. Fellows have substantial protected time for research each week, which facilitates expeditious completion of these projects. In addition, many Fellows are involved with research concerning direct clinical hypotheses, so some of their clinical experiences will be in the context of research programs, such that the clinical work contributes to data collection and ongoing generation of hypotheses about the area of research.

**Clinical Rotations**

Each Fellow has a chance to participate in decisions about rotations. Each experience is crafted to fit the Fellow’s training needs and interests, within the expectations and resources of the program. We affirm collaborative decision-making between Fellows and training staff regarding each Fellow's development and thus the design of each Fellow’s program. In addition, evaluation is a mutual process among Fellows, supervisors, and the training program as a whole. We believe this is necessary to insure continued growth for each Fellow and for the training program.

**Didactics**

NCPTSD D&T Fellows have the opportunity to participate in many didactics throughout the training year. Fellows participate in didactics specifically focused upon the national community of Fellows in the Advanced Fellowship Program for Mental Illness Research and Treatment. Fellows from all participating training sites join by video-teleconference (V-Tel). These required twice monthly, two hour didactics feature “hot topics” in clinical practice, clinical and research ethics, research methods and biostatistics, academic citizenship (e.g., participation in the peer review process), mental health priorities within VHA, research methods, as well as broader aspects of personal (work life balance) and career development (promotion and tenure). Fellows also have the opportunity to participate in optional monthly Grant Writing and Manuscript Writing Workshops through V-Tel.

Fellows will also attend seminars in Psychology Service at VAPAHCS. The seminar experiences are required for NCPTSD D&T Fellows as well as all clinical Fellows within the Psychology Service, and some of the seminars are open to other Psychology Fellows in the VAPAHCS system. The first of these seminars is a Professional Development led by William Faustman, Ph.D.. A variety of topics are covered, all attending to issues of professional development, identity, and self-confidence. Fellows participate actively in determining topics and speakers for this series. In addition, part of the seminar involves training on developing a Continuing Education conference, culminating in presentation of a CE course that has been
designed and implemented by the Fellows, intended for an audience of Psychology and other interprofessional health care providers (Psychology Service at VAPAHCS is an APA-approved provider of CE credits).

The second seminar focuses on the development of skills as a clinical supervisor. This seminar is led by Jeanette Hsu, Ph.D., the Director of Training, and complements Fellows experiences within rotations acting as case supervisors for interns or practicum students and receiving supervision on that supervision. The seminar provides an opportunity for Fellows to compare and discuss experiences as supervisors. In addition to the seminar, all Fellows are expected to supervise at least two cases seen by an intern or practicum student, while receiving supervision on that supervision, from the intern or practicum student’s primary staff supervisor.

Once a month, Fellows can participate in an optional licensing preparation group, led by the Fellows themselves. We strongly encourage but do not require Fellows to prepare for and attain California licensure during their Fellowship year. More information about licensure in California can be found at www.psychboard.ca.gov.

**Other Educational Opportunities for Postdoctoral Fellows**

California Psychology licensing law requires that psychologists have specific training in Human Sexuality, Child Abuse Assessment and Reporting, Partner/Spousal Abuse Assessment and Treatment, Aging and Long-term Care, and Substance Dependence Assessment and Treatment. With the exception of Partner/Spousal Abuse training (now requiring 15 hours), we provide each of these classes during the year as part of the predoctoral internship seminar; Fellows who have not already received training in any of these areas are welcome to attend when the topics are covered for the interns. Licensed psychologists in California are required to have continuing education; we are approved by APA to provide that training, and most CE training for staff is open to Fellows. In addition, each year there are several full day conferences at the VA Palo Alto Health Care System attended by interdisciplinary staff and open to trainees; topics vary from year to year. Several VA clinical research centers (GRECC, Ci2i, National Center for PTSD, MIRECC), as well as Stanford Department of Psychiatry, offer regular seminars or grand rounds, which are open to Fellows.

**Training Objectives for the Fellowship Year**

We have two overarching goals for our postdoctoral training program:

1. Fellows will develop the full range of skills required for independent functioning as a psychologist.

2. Fellows will develop skills required to function effectively as a psychologist in a high priority area of health care for veterans (e.g. PTSD).
Competencies for our first goal are defined by the general advanced practice competence domains identified by APA’s Committee on Accreditation. Specifically, Fellows are expected to demonstrate, by the end of their tenure with us (2 years), competence in the following areas:

- Clinical assessment, diagnosis, and intervention
- Consultation, supervision, and teaching
- Scholarly inquiry
- Organization, administration, management, and program evaluation
- Professional, ethical, and legal issues
- Cultural and individual diversity

The competencies for our special emphasis area are defined as much as possible by nationally accepted (or emerging) criteria defining expertise in the specific area of emphasis. National standards defining competency in the treatment of PTSD are evolving; the specific skills to be developed in the PTSD emphasis area are derived from a review of number of relevant and respected sources (for example, the National Center for PTSD and the APA Division 56 - Trauma Psychology), as well as from review of existing core competencies in other PTSD postdoctoral Fellowships. Many of the specific competencies for this emphasis area are consistent with the general advanced practice competencies described above. The specific emphasis area competencies are the following:

**Post-Traumatic Stress Disorder**

This emphasis involves training in the following competency areas:

- Differential diagnosis of PTSD compared to other disorders and evidence based treatments for PTSD and trauma-related disorders (incorporated into general competency in assessment, diagnosis and interventions). This includes core PTSD assessment modalities, assessment modalities pertaining to diagnoses and conditions commonly co-morbid with PTSD, specifically substance abuse disorders, mild to moderate traumatic brain injury, and anxiety disorders other than PTSD, and assessment of therapeutic and programmatic efficacy; empirically validated and supported treatments for PTSD with commonly occurring co-morbid disorders and conditions, specifically substance abuse disorders and mild to moderate traumatic brain injury.

- Competency in providing consultation about PTSD and trauma-related problems (incorporated into general competency in consultation, supervision and teaching). This competency includes knowledge of military culture and its impact on the course and treatment of PTSD, therapist self-care; introduction to empirically validated and supported assessments and treatments for PTSD and trauma-related disorders.

- Scholarly inquiry (incorporated into general scholarly inquiry) and includes understanding of PTSD research and theory as it affects the individual patient, particularly that pertaining to combat-related PTSD in Vietnam and post-Vietnam era veterans (e.g., Operation Enduring
Introduction and Program Overview

Freedom and Operation Iraqi Freedom), active duty military personnel, military reservists, and National Guard members

Opportunities for Working with Diverse Patient Populations and for Developing Multicultural Competence

VA Palo Alto serves an ethnically diverse population of veterans and active-duty personnel ranging in age from 19-90+, with more and more younger ages represented due to our nation’s current military conflicts. While most of the patients are male, VA Palo Alto has specific women’s mental health programs drawing female veterans and active-duty personnel from around the nation. Female patients now account for 15% of the VA Palo Alto patient population. Patients also range in socio-economic status, from high-income employees of local technology companies to low-income and/or homeless veterans. The overall VA Palo Alto patient population reflects the distribution of self-reported ethnic backgrounds in the pie chart below.

![VA Palo Alto Demographics](image)

The Postdoctoral Seminar devotes a significant section of the seminar series to directly addressing multicultural competence and diversity issues, as well as encouraging presenters for all topics to model critical thinking about diversity issues throughout the seminar series. Furthermore, supervisors address multicultural competence and diversity issues in each rotation and during the course of supervision. The postdoctoral program also takes seriously the support of fellows’ professional development with regard to ethnic identity, sexual orientation, gender, gender identity, disability, and other significant identifications. Towards this goal, our diverse supervisory staff is available for mentoring of fellows from a wide range of backgrounds. Multicultural competence is valuable to us and something we consider essential to ongoing professional development.
Training Objectives and Trainee Self-Disclosure in Training and Supervision

In the most recent version of the APA Code of Ethics (2002), APA described what a program can reasonably expect of students in training regarding personal disclosure. Because this clause is particularly relevant for training programs, such as our postdoctoral programs, we have reproduced this ethics clause and discuss how we approach this issue in our training program:

7.04 Psychologists do not require students or supervisees to disclose personal information in course- or program-related activities, either orally or in writing, regarding sexual history, history of abuse and neglect, psychological treatment, and relationships with parents, peers, and spouses or significant others except if (1) the program or training facility has clearly identified this requirement in its admissions and program materials or (2) the information is necessary to evaluate or obtain assistance for students whose personal problems could reasonably be judged to be preventing them from performing their training- or professionally related activities in a competent manner or posing a threat to the students or others.

We fully endorse the spirit of the clause, believing that trainees should not be forced to reveal more personal information than they feel ready to process, until they feel some comfort with the supervisory situation, and feel safety regarding how shared information will be handled. At the same time, self-disclosure is an important part of the training experience and serves at least two important purposes. First, the supervisor is ultimately legally and ethically responsible for the welfare of any patient seen by the trainee; thus, any important information about the trainee’s internal experience that may affect the conduct of assessment or therapy is expected to be a part of the supervision process. Second, the general competencies expected in our program, especially those described under the category of Professionalism, include some particularly relevant to this new ethics clause, e.g.:

- Shows emotional maturity in professional contexts by tolerating ambiguity and anxiety and considering the views of others, even in charged situations.
-Accurately evaluates level of competency and considers own limitations when working with patients; knows when own level of expertise is exceeded; seeks appropriate consultation when needed.
- Demonstrates knowledge of self and the impact of self on the conduct of therapy, within the theoretical perspective being utilized.
Feelings and the thoughts, beliefs, and circumstances that propel them cannot be simply expunged by a psychologist when it comes time to see a patient or to interact with colleagues. Learning to identify, utilize, and control feelings, attitudes, and actions in the consulting room and all other professional interactions is a lifelong process for all psychologists. We believe it is important that supervision be a place where the Fellow is assisted to explore and understand the qualities and experiences that he or she brings to every aspect of professional work and how these facilitate or hinder effective interactions. We intend that Fellows will recognize, improve, and employ those personal qualities that will assist in forming effective working relationships with patients, peers, NCPTSD D&T staff, staff and trainees of other professions with whom they work in the health care system, etc. — all professional work is influenced by the personal qualities of the trainee, and these are appropriately included in the supervisory process. At the same time, we re-affirm that this needs to be done in a sensitive way, in which the Fellow is given time to develop a safe and effective working relationship with the supervisor. This work should occur such that the underlying APA philosophy is respected. Fellows should not be required or forced to divulge information that is not relevant to the work they are doing or in a way that is not designed to promote and enhance professional development.

**Evaluation Process**

Supervisors, Mentors, and Fellows are expected to exchange feedback routinely as a part of the supervisory process; other evaluation procedures are meant to formalize this continuous information flow. It is the responsibility of the Fellowship Director, Director of Training, Research Mentor, and Clinical Supervisors to ensure that formal evaluation occurs in a timely and constructive fashion, but Fellows are encouraged and expected to take an active role. Evaluation is a mutual process between Fellows, Supervisors, Mentors, and the training program as a whole. Fellows are encouraged to delineate their learning goals, to evaluate their progress at mid-rotation in terms of those original goals, to modify their goals as appropriate, and to plan for attaining these goals during the remainder of the rotation.

We have developed well-specified, measurable exit competencies for our two overarching training goals (i.e., general advanced practice competencies, emphasis area specific competencies). For each clinical setting/experience in the Fellow’s training plan, supervisors complete both mid-rotation and end of-rotation evaluations. Mid-rotation evaluations provide an opportunity for mid-course corrections, while end-of-rotation evaluations are a chance to reflect on overall progress that was made. At the end of each rotation, the Research Mentor evaluates Fellow’s overall progress toward reaching the general advanced practice competencies and the emphasis area specific competencies, based on feedback from supervisors and on their own experience working with the Fellow. If any supervisor notes a problem that could affect successful completion of the Fellowship, Due Process procedures are
in place to work towards resolution of the problem if possible. The Due Process procedure is reviewed in detail with Fellows during orientation at the start of the year.

**Application and Selection Process**

Selection of Fellows is done by the Postdoctoral Selection Committee, with input from the staff in using the following criteria (not in priority order):

- Breadth and quality of previous general clinical or counseling training experience
- Breadth, depth, and quality of training experience areas relevant to the NCPTSD mission
- Quality and scope of scholarship, as indicated partially by research, convention papers, and publications
- Relationship between clinical and research interests/experience of the applicant
- Evidence of personal maturity and accomplishments
- Thoughtfulness of personal statement
- Goodness of fit between the applicant's stated objectives and the training program and medical center's resources
- Strength of letters of recommendation from professionals who know the applicant well

The Fellowship program follows a policy of selecting the most qualified candidates and is an Equal Opportunity Employer. Our commitment to diversity includes attempting to ensure an appropriate representation of individuals along many dimensions, including (but not limited to) gender, sexual orientation, age, ethnic/racial minorities, and persons with disabilities.

In order to apply to the NCPTSD D&T VA Advanced Fellowship program, you must submit via email the required application materials listed below. The fellowship brochure is updated in the fall each year and may be viewed or downloaded at [http://www.paloalto.va.gov/services/mental/ncptsdfellowship.asp](http://www.paloalto.va.gov/services/mental/ncptsdfellowship.asp). It can also be obtained by emailing Fellowship Coordinator, Chetali Gupta at Chetali.Gupta@va.gov. For questions related to program content, please contact Fellowship Director, Marylene Cloitre, Ph.D. at Marylene.Cloitre@va.gov or at 650 493-5000 x2-28353.

**Applications due date is January 9, 2017. All application materials must be received by us on or before this date.** Incomplete application will not be read by the Postdoctoral Selection Committee.

**All application materials from you (#1-3) should be sent via email to Chetali.Gupta@va.gov AND Douglas.Olive@va.gov in one email.** A separate electronic cover letter is not expected (note that any text in your transmittal email will not be saved as part of your application). **Letters from your recommendation letter writers (# 4) should be emailed to Chetali.Gupta@va.gov AND Douglas.Olive@va.gov from their institutional (e.g., university or**
agency) email address with your name indicated in the subject line. We encourage all files to be sent as Microsoft Word or Adobe Acrobat files. Please do not mail any materials in hard copy form.

Application Requirements List:

1. A personal statement of professional goals and interests that strictly follows the instructions. Please review the NCPTSD Fellowship Training Brochure, which describes our programs training goals and opportunities with Training Faculty. In your letter please describe:
   - Your previous educational, clinical and research experiences
   - Your areas of clinical and research interest and its alignment with the NCPTSD emphasis area and mission
   - Specific clinical and research goals and objectives for your Fellowship year
   - Your career “next steps”

*Statement of interest should be no more than 2 pages and include the names of the three individuals expected to provide references.*

2. Current Curriculum Vitae

3. Work Sample, such as a published manuscript on which you are first author or other written product that highlights your work relevant to PTSD emphasis area

4. Three letters of reference from faculty members or clinical supervisors who know your research work well. *One of these letters must be from your primary research mentor.* Letter writers should email an electronic copy from his/her university or agency email address, and this will be considered an official “signed” copy. We encourage letter writers to send documents as Microsoft Word or Adobe Acrobat files

Following receipt of these materials, a select number of applicants will be invited to interview in person or by telephone, in late January and in February. We plan to make initial fellowship offers by telephone on February 28, 2017. We look forward to hearing from you. Further information can be obtained by contacting the Fellowship Coordinator, Chetali Gupta at Chetali.Gupta@va.gov or Fellowship Director, Marylene Cloitre at Marylene.Cloitre@va.gov.

Living in the San Francisco Bay Area

The San Francisco Bay Area is a geographically and ethnically diverse area surrounding the San Francisco Bay in Northern California. Home to world-class universities such as Stanford University and UC Berkeley as well as the headquarters of leading Silicon Valley high-tech companies such as Google, Yahoo!, Facebook, Apple, and eBay, the Bay Area is one of the most culturally, intellectually, and economically dynamic areas of the country. Palo Alto is located on
the San Francisco Peninsula about 35 miles south of San Francisco, which is referred to as “The City” and the cultural center of the Bay Area.

The Bay Area has three major airports (San Francisco International, San Jose Mineta International, and Oakland), as well as an extensive freeway system. Public transportation on BART (Bay Area Rapid Transit) and local bus systems connect the cities and suburbs of the Bay Area, though most residents drive themselves. Housing for renters and homebuyers is one of the most expensive in the country.

The Bay Area is the sixth most populous metropolitan area in the United States, with high levels of international immigration. Palo Alto is part of Santa Clara County which has slightly different demographics than the Bay Area overall, with greater numbers of Asians and Asian Americans and fewer numbers of African Americans. Also, thirty-seven percent of the people living in Santa Clara County were foreign-born. There are 64,275 Veterans living in Santa Clara County. See pie charts below for specifics on state and county demographics from U.S. Census data (retrieved Oct 1, 2016, from http://quickfacts.census.gov/qfd/states/06/06085.html)

---

**California Demographics**

- African American (6.5%)
- Native American (1.7%)
- Asian/American/Pacific Islander (14.7%)
- White (non-Hispanic) (38.0%)
- Hispanic/Latino (38.8%)

**Santa Clara County Demographics**

- African American (2.9%)
- Native American (1.3%)
- Asian/American/Pacific Islander (35.6%)
- White (non-Hispanic) (32.8%)
- Hispanic/Latino (26.3%)
The region has a lot to offer, making the Bay Area one of the most desirable places to live in the country – mild weather, beaches, mountains, and open space perfect for outdoors enthusiasts, a thriving business and technology sector, and excellent universities and academically-affiliated medical centers providing resources for intellectual and scholarly activities. Visitors and residents alike can enjoy the diversity of social and cultural attractions, such as museums, cultural events, top-rated restaurants, and wineries in the Napa and Sonoma Valleys. In addition to easily accessible outdoor recreation areas for skiing, surfing, hiking, and biking, sports fans can follow the many Bay Area sports teams (Oakland A’s, SF Giants, SF 49ers, San Jose Sharks, Golden State Warriors).

The NCPTSD Fellowship values practicing balance in one’s professional and personal life, which our Mentors strive for and hope to be good models for our Fellows. If you come to NCPTSD for fellowship, we hope you will have many opportunities to explore and enjoy living in this great area!
Contact Information

The NCPTSD is open for business Monday through Friday, 8AM - 4:30PM Pacific Time, except on Federal holidays. The Fellowship administration can be reached at the following address and contact information:

**Marylene Cloitre, Ph.D.**
Director, VA Advanced Fellowship in PTSD Research and Treatment
VA Palo Alto Health Care System
795 Willow Road (334-PTSD, B-230)
Menlo Park, CA 94025
Telephone: (650) 493-5000 x2-28353
Email: marylene.cloitre@va.gov

**Chetali Gupta**
Fellowship Coordinator
VA Palo Alto Health Care System
795 Willow Road (334-PTSD, B-242)
Menlo Park, CA 94025
Telephone: (650) 493-5000 x2-25588
Email: chetali.gupta@va.gov

An electronic copy of this brochure may be obtained at http://www.paloalto.va.gov/services/mental/ncptsdfellowship.asp or by emailing the Fellowship Coordinator at Chetali.gupta@va.gov. Thanks for your interest in our program. Feel free to be in touch with the Fellowship Coordinator at Chetali.Gupta@va.gov or Fellowship Director at Marylene.Cloitre@va.gov if you have additional questions.

Appendix A
National Center for PTSD, D&T Fellowship Mentors

Eve Carlson, Ph.D., Investigator, NCPTSD Dissemination & Training Division

Dr. Carlson is a clinical psychologist and a senior researcher with the Dissemination and Training Division of the National Center for Posttraumatic Stress Disorder and the Palo Alto VA Health Care System. Dr. Carlson’s research focuses on assessment, risk prediction, and increasing access to care through use of peer coaches and online programs that foster mental health. Her recent projects included development of risk factor prediction measures for military, VA, and civilian populations, development of other trauma-related measures (dissociation, trauma exposure, emotion regulation, self-destructive behavior, and impairment of relationships related to deployment or traumatic stress), study of noncombat trauma exposure in military veterans, multivariate prediction of responses to traumatic stress in traumatic injury patients, and research on intensive (“real time”) assessment of responses to trauma. She is just beginning research on peer-supported use of VA online interventions focused on problem-solving, reducing alcohol use, and anger management. Her research has been funded by NIMH and Clinical Science R & D Service of VA and recognized by awards from the International Society for Traumatic Stress Studies (ISTSS) and the International Society for the Study of Trauma and Dissociation. She has served ISTSS as President and for three terms on the Board of Directors. She has served on several journal editorial boards and on NIH and VA grant review panels. Her experience in graduate research education includes mentoring and advising graduate and post-doc investigators on developing research projects, preparing research and training presentations, reviewing manuscripts for journals, preparing manuscripts for publication, preparing grant applications, and becoming involved with professional association leadership activities. Dr. Carlson will provide expertise in assessment and risk factor and prediction research and can serve as a research mentor.

Marylene Cloitre, Ph.D., Associate Director of Research, NCPTSD Dissemination & Training Division and Clinical Professor (Affiliate) of Psychiatry and Behavioral Sciences, Stanford University.

Dr. Cloitre is the Director of the Fellowship Program and is committed to providing an environment that promotes the successful development of young trauma clinicians and researchers. Her primary research involves the evaluation of Skill Training in Affective and Interpersonal Regulation (STAIR), an intervention that focuses on enhancing emotion management and relationship skills in trauma-exposed populations, particularly for those with repeated and chronic trauma histories, such as Veterans who have experienced Military Sexual Trauma (MST). She is adapting STAIR for use in primary care with a focus on matching interventions to patient identified problems. She is also implementing technologies to increases the dissemination of evidence-based treatments. This includes the use of technology that supports home-based services and the development of web-based self-guided interventions, which includes the newly developed webSTAIR program that is being disseminated to rural women Veterans. Dr. Cloitre has received funding from the National Institute of Mental Health (NIMH) and other government agencies as well as private foundations. She received her Ph.D. from Columbia University. Before joining NCPTSD, Dr. Cloitre was a Professor of Psychiatry and of Child and Adolescent Psychiatry at
the New York University Langone School of Medicine. Dr. Cloitre is a past-president of the International Society for Traumatic Stress Studies (ISTSS) and a member of the WHO ICD-11 Working Group for Trauma and Related Disorders. She is also on the Board of Directors for the Anxiety Disorders Association of America (ADAA) and on the Advisory Board of Tuesday’s Children, a grassroots organization of 9/11 families that have lost a parent.

**Amit Etkin, M.D., Ph.D., Investigator, Mental Illness Research Education and Clinical Center (MIRECC) at VAPHCS and Associate Professor of Psychiatry and Behavioral Sciences, Stanford University.**

Dr. Etkin is a psychiatrist and neuroscientist, whose lab is at both the VAPHCS and Stanford University. The overarching aim of the Etkin lab (etkinlab.stanford.edu) is to understand the neural basis of emotional disorders and their treatment, and to leverage this knowledge to develop novel treatment interventions. Ongoing post-traumatic stress disorder (PTSD)-related research includes work identifying the brain mechanisms involved in psychotherapy for PTSD and identifying biological markers that predict the response to treatment. Other work is focused on directly evaluating brain circuitry abnormalities in PTSD using a cutting-edge combination of non-invasive brain stimulation methods and brain imaging. This type of circuit probing at once has both implications for diagnosis as well as itself becoming the foundation of a novel brain stimulation treatment. All of these projects rest on a foundation of basic neuroscience research in the lab, thereby forming a broad package of translational research aimed at yielding a range of new brain-based diagnostic and treatment approaches for PTSD. Similar work is also ongoing in the lab on other mood and anxiety disorders. Dr. Etkin’s work is funded by grants from the National Institute of Mental Health and Cohen Veterans Bioscience. Dr. Etkin received his MD/PhD in the laboratory of Nobel laureate Dr. Eric Kandel at Columbia University, after which he moved to Stanford University for a concurrent Psychiatry residency and post-doctoral training with Dr. Alan Schatzberg. He joined the faculty at Stanford in 2009 as part of the University Tenure Line. He has been awarded the prestigious BRAINS (Biobehavioral Research Award for Innovative New Scientists) R01 Award from the NIMH. The BRAINS award is an innovation-focused R01 meant to identify the most promising young scientists whose work is positioned to make them leaders in neuroscience and psychiatry, through cutting-edge, high-payoff science. Dr. Etkin has also received the Dana Neuroscience Scholar Award, is on the editorial board of *Depression and Anxiety, Molecular Neuropsychiatry* and *Biology of Mood and Anxiety Disorders*, as well as an Associate Editor of *Neuropsychopharmacology*.

**Afsoon Eftekhar, Ph.D., Investigator, Prolonged Exposure Mental Health Training Initiative, NCPTSD Dissemination & Training Division.**

Dr. Eftekhar is currently coordinating the national Prolonged Exposure Training Program. She completed her doctorate in Clinical Psychology at Kent State University. She completed her clinical internship at the Seattle VA, and fellowship at the University of Washington Center for Anxiety and Traumatic Stress. Her primary research foci include emotional processes in psychopathology, treatment efficacy and effectiveness, and improving dissemination and implementation of best practices. Dr. Eftekhar has expertise in clinical supervision, with particular expertise in prolonged exposure therapy. Dr. Eftekhar will provide expertise in cognitive-behavioral treatment of PTSD and in treatment dissemination and implementation, and will be a potential mentor.
Susan Frayne, MD., M.P.H., HSR&D Center for Innovation to Implementation

Dr. Frayne is Associate Professor of Medicine at Stanford University, a member of the Center for Innovation to Implementation, and Associate Director of the Women’s Health Center at the VA Palo Alto Health Care System. Both the Center for Innovation to Implementation and the Women’s Health Center have been awarded Center of Excellence status. She also directs the MOVE-TIME clinic, an intensive interdisciplinary weight management program for obese veterans at VA Palo Alto. Dr. Frayne received her undergraduate training from Pomona College and her MD from University of California, San Diego. She completed her residency in Internal Medicine at the University of California, Irvine, and went on to complete a Fellowship in General Internal Medicine and receive her MPH from Boston University. Dr. Frayne’s research examines the interface of medicine and mental health, especially strategies that promote delivery of high quality, integrated medical care for patients with mental illness who present to the primary care setting, with a special focus on women who have post-traumatic stress disorder caused by prior exposure to violence. Dr. Frayne will provide expertise on health services research, integration of medical and mental health care, and gender issues in care, and will be a potential research mentor.

Rachel Kimerling, Ph.D., Investigator, NC-PTSD Dissemination and Training Division & VA HSR&D Center for Innovation to Implementation

Dr. Kimerling is a Clinical Psychologist. Her national roles include Senior Consultant to VA Mental Health Services for the National Military Sexual Trauma Support Team, and the VA Undersecretary for Health Special Committee for PTSD. Dr. Kimerling completed her undergraduate education at Duke University, received her Ph.D. from the University of Georgia. She completed her internship at VA Palo Alto and a post-doctoral fellowship at the Stanford University School of Medicine. Dr. Kimerling conducts health services research in the areas of gender equity, screening and detection, and performance monitoring. She has a special interest in military sexual trauma and intimate partner violence. The research team provides excellent opportunities for analysis of VA administrative data, measure development and psychometrics, and epidemiology. Dr. Kimerling’s active research includes studies on the epidemiology of lifetime trauma, mental health conditions, and access to mental health services among women Veterans; development of a self-report measure of healthcare engagement among individuals with mental health and chronic medical conditions; and the long term health effects of Vietnam service among women Veterans. Dr. Kimerling is a member of the VA HSR&D National Mentoring Network and has mentored several VA Career Development Awardees.

Eric Kuhn, Ph.D, Investigator, NCPTSD Dissemination & Training Division is a clinical psychologist in the National Center for PTSD and a Clinical Assistant Professor (affiliated) at Stanford University School of Medicine. Dr. Kuhn completed his Ph.D. at the University at Albany, SUNY and clinical internship at the VA Palo Alto Health Care System Psychology Internship Training Program. He then completed a 2-year MIRECC/Stanford Advanced Fellowship in Mental Health Research and Treatment. Dr. Kuhn’s research focuses on using technology, both web and mobile, to increase access to and engagement in PTSD care and to make care more patient centered and effective. He also has interests in assessing and treating post-deployment driving issues in Veterans of the military operations in Afghanistan and Iraq and has developed measures and a CBT group treatment protocol for such issues. Dr. Kuhn is a licensed
psychologist with extensive training in both Cognitive Processing Therapy and Prolonged Exposure Therapy. Dr. Kuhn serves as a research mentor to NCPTSD postdoctoral fellows, as well as other psychology trainees.

**Steven E. Lindley, M.D., Ph.D., Director of Outpatient Mental Health, VAPA HCS**

Dr. Lindley directs the Physician Track of the Advanced Mental Health Fellowship. Dr. Lindley has a joint appointment at the VA and at Stanford, where he is an Associate Professor of Psychiatry and Behavioral Sciences. He completed his undergraduate training at Michigan State University, where he also obtained his M.D. and his Ph.D. in Neuroscience. Dr. Lindley completed his Psychiatry Residency and a Clinical Research Fellowship at Stanford. He is a diplomate in both Psychiatry and Psychosomatic Medicine. Dr. Lindley’s responsibilities include overseeing the outpatient Mental Health Clinics, the PTSD Care Team (PCT), and the primary care-based Behavioral Health Teams at the VA Palo Alto Health Care System. Dr. Lindley was previously a Staff Psychiatrist at the residential Trauma Recovery Program (then part of the National Center for PTSD) at the Palo Alto VA. Dr. Lindley’s research interests span the entire translation chain including animal models of stress, clinical psychopharmacology trials, and surveillance of medication side effects. He is Principal Investigator for the Rural Peer Support program funded by the Arlene Rosen Foundation, and a Site PI or Co-Investigator on four studies funded by VA, NIMH, and DOD. Dr. Lindley is regularly involved in mentoring and training Stanford Psychiatry Residents at the Palo Alto VA. Dr. Lindley will contribute expertise in psychopharmacological research, clinical management of PTSD, administrative challenges in treatment implementation, and will be a potential research mentor.

**Shannon McCaslin, Ph.D., Clinical and Research Psychologist, National Center for PTSD, Dissemination & Training Division and Clinical Associate Professor (Affiliated), Stanford University.**

Dr. McCaslin has been conducting clinical and research work in the area of traumatic stress, primarily among veterans, for over 15 years. Her research has focused on understanding risk and resilience for posttraumatic stress and related conditions and the relationship between posttraumatic stress/associated conditions and functioning in social, academic, and occupational domains. Dr. McCaslin completed a CSR&D Career Development Award in 2012 specifically focused on understanding mediators and moderators of psychosocial functioning among Veterans with PTSD. She has also focused on finding ways to better provide services to veterans, including modification of evidence-based protocols and dissemination of best practices. Current research projects include a study of the feasibility of delivering a brief intervention to reduce anxiety following stressor and trauma exposure in Service Members and Veterans who have deployed; a study to develop a measure of military acculturation which will allow clinicians and providers to better understand the role of identification with military culture on transition to the civilian setting and mental health outcomes; and a study to evaluate and understand how to improve educational tools (i.e. web-based tools and military culture training) for providers in the community that see Veterans for treatment. In addition, Dr. McCaslin has taken the lead on the development of and manages a VA website for behavioral health providers seeing Veterans in their communities (The Community Provider Toolkit; [www.mentalhealth.va.gov/communityproviders](http://www.mentalhealth.va.gov/communityproviders)).
Introduction and Program Overview

**Dorene Loew, Ph.D., Program Director, PTSD Recovery Programs, VAPAHCS**

Dr. Loew is the Program Director and Psychology Service PTSD Section Leader for the Trauma Recovery Programs in the Menlo Park Division of VAPAHCS. She completed her undergraduate training at the University of California, Berkeley, and received her Ph.D. from the University of Vermont. Dr. Loew offers clinical expertise in Cognitive Processing Therapy and other evidence-based treatments for PTSD. She also collaborates on education and research in PTSD. She is a member of the VISN21 PTSD Committee and the VA PAHCS PCT Steering Committee, and a Mentor for VISN21 clinicians through the NCPTSD national PTSD Mentoring Program. Dr. Loew has extensive experience in supervising psychology interns. Dr. Loew will provide advanced expertise in PTSD treatment, in clinical supervision, and in interprofessional teams, and will be a potential clinical/education mentor.

**Jason Owen, Ph.D., MPH, Investigator, NCPTSD Dissemination & Training Division** is a licensed clinical psychologist and mobile apps team lead for the National Center for PTSD. He completed his undergraduate studies at Duke University, doctoral and public health degrees at the University of Alabama at Birmingham, and internships and post-doctoral training at the University of California, Los Angeles. Dr. Owen's research interests focus on the use of technology to maximize the public health impact of psychological interventions for those with PTSD and other chronic physical and mental health conditions. He is currently funded by NIH to examine the impact of social networking on outcomes of web-based interventions. He is currently conducting research related to continuous evaluation of population-facing mobile apps, mechanisms to improve engagement with self-guided interventions, and clinical dashboards to improve provider-patient communication and reduce premature dropout from treatment. Current ongoing studies include pilot trials of PTSD Family Coach for caregivers of Veterans with PTSD, Couples Coach for addressing functional problems in Veterans and their partners, Mindfulness Coach in Veterans with PTSD and those experiencing cancer-related medical trauma, and VetChange for reducing problem drinking in Veterans with PTSD. Dr. Owen has provided clinical and research supervision for many practicum students and interns and contributes expertise in web and mobile-based interventions.

**Craig S. Rosen, Ph.D., Deputy Director, NCPTSD Dissemination & Training Division**

Dr. Rosen is Deputy Director of our Division of the National Center for PTSD and Associate Professor of Psychiatry and Behavioral Sciences at Stanford University. He is an investigator in the VA HSR&D Center for Innovation to Implementation and Dr. Rosen completed his undergraduate training at M.I.T., received his Ph.D. in Clinical Psychology from Yale, and completed a postdoctoral fellowship at the Stanford/VA Center for Innovation to Implementation. He is currently Mutual PI of a VA-funded study on organizational factors impacting use of evidence-based psychotherapies for PTSD. He was PI for two multi-site trials of telephone case management interventions aimed at improving patients’ engagement in PTSD treatment. He is a co-investigator on several other studies of treatment engagement, family support for PTSD recovery, and online and mobile self-help tools for patients and their family members. Dr. Rosen and has mentored several HSR&D and NCPTSD postdoctoral fellows who have gone on to academic or VA careers. He serves on the Editorial Board of the *Journal of Traumatic Stress*. Dr. Rosen will contribute expertise in health services research, implementation science, and telemedicine interventions for PTSD and will be a potential research mentor.
Josef I. Ruzek, Ph.D., Director, NCPTSD Dissemination & Training Division

Dr. Ruzek currently directs the Dissemination and Training Division of the National Center for PTSD at the VA Palo Alto Health Care System. Dr. Ruzek completed his undergraduate degree at UCLA and his Ph.D. at State University of New York, Stony Brook. Before coming to the VA, Joe worked at a non-profit alcohol agency in London England for 8 years, and he was Program Director of a for-profit chemical dependency unit in Southern California. He is a developer of the joint VA-DOD Clinical Practice Guideline for Management of Traumatic Stress and an editor of two editions of Cognitive-Behavioral Therapies for Trauma and of Caring for Veterans with Deployment-Related Stress Disorders: Iraq, Afghanistan, and Beyond. Dr. Ruzek is a past member of the (VHA) Undersecretary’s Special Committee on PTSD and currently serves on the Board of Directors of the International Society for Traumatic Stress Studies, where he was Vice President from 2006-2007. Dr. Ruzek was previously Psychology Fellowship Director for the Sierra-Pacific MIRECC. Dr. Ruzek is PI for a CDMRP-funded trial of Internet-based clinician training in cognitive-behavioral psychotherapy for PTSD and a randomized controlled trial of a web intervention to increase familiarity and use of clinical practice guidelines. He recently developed a Practice-Based Research Network to accelerate effective implementation of best practices in PTSD care. His other current major projects are directed at disseminating evidence-based cognitive-behavioral treatments for PTSD via the national rollout of Prolonged Exposure treatment in VA, and developing phone- and Internet-based interventions for trauma survivors. Dr. Ruzek will provide expertise in best practices for PTSD, national dissemination and implementation initiatives, and the intersection of science and policy. He will also be potential research and education mentor.

Tasha Souter, M.D., Medical Director, PTSD Recovery Programs, VAPAHCS

Dr. Souter oversees psychiatric and medical patient care for the 40-bed Men’s Trauma Recovery Program and the 10-bed Women’s Trauma Recovery Program at the VA Palo Alto Health Care System. Dr. Souter received her undergraduate education at Scripps College and Claremont McKenna College. She received her M.D. from University of California, San Francisco, and completed her internship and psychiatry residency at Stanford. She is a Clinical Instructor (Affiliated) at Stanford, where she trains, supervises and advises psychiatry residents completing a six-month PTSD rotation. Dr. Souter also teaches on PTSD pharmacotherapy and on traumatic brain injury in the NCPTSD clinical training program. Dr. Souter will provide expertise in pharmacological treatment of PTSD and on management of PTSD and co-occurring psychiatric and medical disorders, and will serve as a potential clinical/education mentor.

Quyen Q. Tiet, Ph.D., Researcher, NCPTSD Dissemination & Training

Dr. Tiet has the expertise in co-occurring substance use disorder (SUD) and PTSD or other psychiatric disorders, suicide, health services research, and resilience and coping. He has received funding from the VA, NIH, and private foundations, and is currently involved and just completed multiple studies including a HSRD IIR study to develop a drug screening instrument to be used in the primary care settings, a QUERI -RRP study to examine how VA PTSD specialty treatment programs treat patients with SUD. He is examining telephone and mobile apps interventions for SUD and PTSD. Dr. Tiet has been a PI and project director for multiple multi-site studies and has authored or co-authored multiple peer-reviewed journal
articles related to PTSD and/or substance use disorders. His formal and informal mentees have moved on to successful careers. Dr. Tiet received his BA at the University of California at Berkeley and his Ph.D. at the University of Colorado at Boulder. He completed his internship at Yale University and postdoctoral fellowship at Columbia University. He was previously an Assistant Professor at Columbia University School of Medicine. Currently he is also a Clinical Associate Professor (affiliate) at Stanford University School of Medicine, Department of Psychiatry and Behavioral Sciences, and a Professor at California School of Professional Psychology at Alliant International University. A licensed clinical psychologist in California and New York, Dr. Tiet has many years of experience working with individuals from diverse cultural backgrounds including veterans, refugees and crime victims who have experienced trauma.

**Jodie A. Trafton, Ph.D., Director, Program Evaluation and Resource Center (PERC)**

In addition to her role at PERC overseeing evaluation of VA addiction programs, Dr. Trafton is an affiliate investigator at the Center Care Evaluation, an affiliate investigator at NCPTSD, Director of the Institute for Disease Management in the Institute for Brain Potential, and an Assistant Clinical Professor (Affiliate) at Stanford. Dr. Trafton received her bachelors’ and masters’ degrees in biology from Stanford and her Ph.D. in Neuroscience from the University of California San Francisco. Dr. Trafton has been PI for multiple VA research studies in the areas of opioid abuse, pain management, computerized risk assessment and decision support, and comorbid PTSD and substance use. She is currently PI (along with Dr. Kimerling) of a trial testing “Seeking Safety” cognitive-behavioral therapy among VA SUD patients with co-occurring PTSD, and is co-PI for a VA-funded study assessing potential feasibility and staff receptivity to using pharmacogenomic information to inform opioid prescribing. Dr. Trafton will contribute expertise in biological mechanisms related to PTSD and commonly co-occurring substance use and pain problems and expertise in development and clinical implementation of automated decision support tools. She will also be a potential research mentor.

**Robyn D. Walser, Ph.D., Investigator, NCPTSD Dissemination and Training**

Dr. Walser received her Ph.D. in Clinical Psychology from the University of Nevada-Reno. She is currently developing innovative ways to translate science-into-practice and is responsible for the dissemination of state-of-the-art knowledge and treatment, related to Post Traumatic Stress Disorder, to health care professionals and trainees across all VA facilities nationally. She is working on a number of web-based and educational PTSD products for both practitioners and veterans. In addition, she is responsible for several research projects investigating use of mindfulness and ACT in PTSD populations, plus PTSD in the geriatric population. Dr. Walser will provide expertise on psychosocial treatment of PTSD, treatment of comorbid substance use and PTSD, clinician training, and treatment dissemination, and will be a potential education, research, and clinical mentor.

**Julie Weitlauf, Ph.D., Psychology Fellowship Director, Sierra-Pacific MIRECC**

Dr. Weitlauf is Psychology Fellowship Director for the Advanced Fellowship in Mental Health Research & Treatment at the Sierra-Pacific MIRECC, and an investigator with the MIRECC and the HSR&D Center for Innovation to Implementation. She completed her undergraduate training at the University of Washington, Seattle, and received her Ph.D. in Clinical Psychology from the University of Illinois, Chicago. After completing an Advanced Mental Health Fellowship with the Sierra-Pacific MIRECC, she
received an HSR&D affiliated investigator followed by a CDA award (accepted without salary). Her research interests include women's health and mental health, sexual violence and PTSD in women, impact of PTSD, substance use disorders, and other mental health comorbidities on receiving screening for cervical cancer, and overlap of sexual abuse, PTSD, substance abuse and engagement in prostitution. Dr. Weitlauf will provide expertise on gender issues related to PTSD care, effects of PTSD on health-related behaviors, and will be a potential research mentor. She will also advise Drs. Rosen and Lindley on mentoring and career development of Fellows, and work closely them on development of didactic programming that can be shared across Fellowship programs.

**Shannon Wiltsey Stirman, PhD., Investigator, NC-PTSD Dissemination & Training Division**

Dr. Stirman is a staff investigator at the Dissemination and Training Division of the National Center for PTSD. She completed her undergraduate training at St. John’s College, Santa Fe, and received her PhD in Clinical Psychology from the University of Pennsylvania. After completing a postdoctoral fellowship at the University of Pennsylvania, Dr. Stirman became an investigator in the Women’s Health Sciences Division of the National Center for PTSD. In 2015, she transferred to the Dissemination and Training Division of the National Center for PTSD. Her research interests center around the implementation and sustainability of evidence-based psychosocial treatments in public mental health treatment settings. Her research has been funded by the National Institute of Mental Health and the Canadian Institute of Health Research. Current and recently completed projects include a funded study to compare two different strategies to improve and sustain the delivery of Cognitive Processing Therapy across multiple healthcare systems, a study to develop a more streamlined strategy to assess treatment fidelity, and a study to compare different strategies for consultation and training in evidence-based psychotherapies. Secondary data from these studies include session recordings and clinical materials for fidelity assessment and process ratings, recordings of consultation sessions, symptom measures, and therapist and organization-level assessments of implementation constructs. Her clinical expertise includes cognitive behavioral therapies, cognitive processing therapy, suicide risk assessment and prevention, PTSD, and depression. She serves on editorial boards and leads or advises implementation-focused special interest groups in national professional associations. She is available to mentor Fellows on implementation theory and research, and to serve as a clinical mentor.

**Steve H. Woodward, Ph.D., Director PTSD Sleep Laboratory, NCPTSD Dissemination & Training Division**

Dr. Woodward is a staff investigator at the Dissemination and Training Division of the National Center for PTSD and Director of the PTSD Sleep Research Laboratory. He completed his undergraduate training at Brown University and received his Ph.D. in Clinical Psychology from the University of Southern California. He completed a postdoctoral clinical fellowship in Geropsychology at the VA Palo Alto Health Care System, and an NRSA Individual Research Fellowship at Stanford University. He has established research programs in PTSD-related sleep disturbance, advanced actigraphic sleep recording, cognitive psychophysiology, combat-related driving impairments/interventions, structural neuroimaging. He is currently funded by the DoD to investigate the impact of canine companionship on cardiac reactivity and tone in PTSD. Dr. Woodward has supervised undergraduates, practicum students, interns and postdoctoral fellows pursuing research careers. He has served on various research-related committees at the VA Palo Alto Health Care System and Stanford University, the Editorial Board of the Journal of
Traumatic Stress, and as an ad hoc reviewer on numerous grant review committees. Dr. Woodward will provide expertise on PTSD-related sleep disturbance and psychophysiological research on PTSD and will be a potential research mentor.

**Lindsey Zimmerman, Ph.D., Investigator, NCPTSD Dissemination & Training Division**

Dr. Zimmerman completed dual-discipline training in clinical and community psychology at Georgia State University and enlists qualitative and quantitative research methods in her work. Dr. Zimmerman received funding from the National Institute of Alcohol Abuse and Alcoholism and the Alcohol and Drug Abuse Institute for her research on PTSD and alcohol use disorders (AUD) while at the University of Washington School of Medicine. At NC-PTSD, Dr. Zimmerman is partnering with VA stakeholders (local leadership, frontline staff, national program offices, and Veteran patients) to use participatory system dynamics modeling to reduce delays and increase the reach of evidence-based psychotherapies and pharmacotherapies in outpatient mental health. This multi-site implementation research is funded by the National Institute of Drug Abuse and the VA, and focuses on PTSD, depression, alcohol use disorder and opioid use disorder patient populations. Dr. Zimmerman has expertise in implementation science and health care quality improvement methods that use VA administrative and electronic health record data drawn from the enterprise-wide VA health system SQL database. Dr. Zimmerman can provide mentorship in use of the R programming language to conduct statistical analyses, including multi-level and multi-site analytic designs. She is a licensed clinical psychologist with proficiency in PTSD and AUD treatments, including relapse prevention, motivational interviewing, prolonged exposure, cognitive processing therapy, acceptance and commitment therapy and family systems intervention. Dr. Zimmerman’s team focuses on participatory research methods to improve the quality of healthcare systems and provides opportunities for implementation facilitation and capacity-building engagement with a wide range of VA stakeholders.
